

# SECURITY PROGRAMS

## FIND AND FIX VULNERABILITIES

Comprehensive visibility into your organization's attack surface is critical to cybersecurity success. CBI's Advanced Testing Services (ATS) leverage Red Team strategies that combine automation, sophisticated manual techniques, and the latest tools available to identify security weaknesses in your environment and evaluate your defenses.

## OFFERINGS

### PENETRATION TESTING

CBI's penetration testing services actively exploit architectural weaknesses and configuration vulnerabilities to determine how effectively your security controls perform. We have a passion for collaboration, working shoulder to shoulder with defenders and the business to understand your objectives and better evaluate your ability to detect and respond to threats. We leverage internal, commercial, community and open-source threat intelligence to test the performance of your security investments during a real-world attack.

We offer a cost-effective Penetration Testing as a Service (PTaaS) delivery platform for organizations that require frequent testing. Managed through our secure ATS portal, it enables you to begin remediation efforts in real time as results and notifications are documented by our team.

### Advanced Testing Services Portal

- Secure, private cloud environment
- Meets ISO27001/27017/27018, SOC 1, SOC 2, SOC 3, FIPS140-2 and GDPR requirements
- Connects teams to drive collaboration and reduce vulnerability remediation lead times
- Displays data in an executive dashboard before, during, and after a test is performed
- Enables remediation efforts to begin in real time as results are documented

### APPLICATION TESTING

CBI's Application Testing Services address sophisticated threats to the application layer with expert penetration testing of web applications, mobile applications, desktop applications, and APIs. We combine advanced technology with our team of application testers (all former web developers) to assess your applications and identify overlooked vulnerabilities and exploits.

Detailed results—including attack simulations—are readily accessible through our secure Advanced Testing Services (ATS) portal. Developers can consult with us on findings, and retest discovered vulnerabilities to verify successful remediation.

### INCIDENT RESPONSE

CBI's Incident Response (IR) team incorporates Blue Team strategies and techniques to help your organization assess incident response readiness, and develop a proactive plan to minimize damage in the event of a breach.

We offer both on-demand and subscription-based services in tiered response plans to help you quickly investigate incidents. Our team of highly skilled experts rolls out key technology that allows us to rapidly triage, remediate, and restore environments with accuracy, and examine physical and digital evidence to uncover what did or did not happen.

We are available when you need us, with the added assurance of enhanced service level agreements **between CBI and your organization.**
