

SECURITY PROGRAMS

FIND AND FIX VULNERABILITIES

Comprehensive visibility into your organization's attack surface is critical to cybersecurity success. CBI, A Converge Company offers Advanced Testing Services (ATS) that leverage Red Team strategies combining automation, sophisticated manual techniques, and the latest tools available to identify security weaknesses in your environment and evaluate your defenses.

OFFERINGS

PENETRATION TESTING

actively exploits architectural weaknesses and configuration vulnerabilities to determine how your security controls perform. We have a passion for collaboration, working shoulder to shoulder with defenders and the business to understand your objectives and ability to detect and respond to threats. We leverage internal, commercial, community and open-source threat intelligence to test the performance of your security investments during a real-world attack.

PENETRATION TESTING AS A SERVICE [PTaaS]

offers a cost-effective delivery platform for organizations that require frequent testing. Managed through our secure portal, it enables you to begin remediation efforts in real-time as results and notifications are documented by our team.

APPLICATION TESTING

addresses sophisticated threats to the application layer with expert penetration testing of web applications, mobile applications, desktop applications, and APIs. We combine advanced technology with our team of application testers (all former web developers) to identify overlooked vulnerabilities and exploits. Detailed results – including attack simulations – are readily accessible through our secure portal. Developers can consult on findings and retest discovered vulnerabilities to verify successful remediation.

EMERGING THREAT SERVICES

help identify weaknesses before your organization becomes vulnerable. With a team that lives on the frontline of cybersecurity, we understand the data behind emerging risks and how to mitigate their threats proactively. We balance both tactical and strategic evaluations to understand gaps in your defenses and devise a workable plan of action. Our custom approach addresses the full spectrum of recent developments that can put you, your company, and your employees at risk.

INCIDENT RESPONSE

incorporates CBI's Blue Team strategies to help your organization assess incident response readiness, and develop a proactive plan to minimize damage in the event of a breach. We offer both on-demand and subscription-based services in tiered response plans to help you quickly investigate incidents. Our team of highly skilled experts rolls out key technology that allows us to rapidly triage, remediate, and restore environments with accuracy, and examine physical and digital evidence to uncover what did or did not happen.

We are available when you need us, with the added assurance of enhanced service level agreements **between CBI and your organization.**
